

SAN MARTINERO

Of the many varieties of *Agave karwinskii* that grow in and around Santa Catarina Minas, san martinero aka "barril" is the largest in terms of height and girth. Having a higher piña to stalk ratio means that while these plants are the same species as tobasiche, destilados made from san martinero are much less woody and more fruit forward.

Batch: SMAR2026-A, 48.95%
